

Pre-emergent herbicide discussion session

Birchip Cropping Group Monday 4th August 2025 1 - 3.30pm

Pre-emergent herbicides – Your best friend or sometimes problem child?

Pre-em herbicides are the foundation for weed control in many grain crops. But sometimes performance may not be as expected, or outcomes in some situations difficult to understand.

You are invited to a short pre-emergent herbicide discussion session led by Mark Congreve from ICAN. Mark is a nationally respected herbicide expert who leads several GRDC herbicide research and training projects.

We want to understand what is on your mind. Topics to be discussed:

- What drives pre-emergent herbicide efficacy and crop safety?
- Are particular pre-emergent herbicide use patterns giving you concern or not performing as you expect? This could be in relation to crop safety, weed efficacy, or carryover. We are especially interested in hearing from growers working with difficult or marginal soil types.
- What decision support advice would help you better understand rotational crop safety at an individual paddock level?
- Have you ever considered variable rate pre-emergent herbicide application tailored to different soils or weed pressure within paddocks?
- Are there other areas of pre-emergent herbicide research that require industry investment?
- Are there opportunities to extract greater value from pre-ems if the research were conducted?

All growers and agronomists are welcome to attend. There is no charge for the day, however RSVP is greatly appreciated. Register at the following link or contact Erica at erica@icanrural.com.au
